

# ORAL PRESENTATION ON MY WEBSITE

Will Support

Naam: Willem De Bie

Klas: 6IB

Schooljaar: 2021-2022

I'm Willem and I've been assigned by the Minister of Education to create a "virtual company" to test my informatics skills and ability to work out something big on myself.

We were assigned to create a template website for this "company", alongside a helpdesk and other useful tools. As of now, we only had to focus on building the static website. The helpdesk will come later.

Before even thinking about putting your website online for everyone to see, you need the fundamentals. Since we've been learning HTML & CSS for almost a year, these languages will be used to create it.

First comes HTML. As anyone should, I started by writing an "index.html" page. Not worrying about the head of the page (as there would be a list of all other html pages), I wrote code for the "About" text and the quotes I've gathered from Seppe and Jade.

It took me some time to come up with a good theme for the website, so I wrote everything with a basic white background and plain text to get a good look at all the stuff I had to add to the website. However, I knew how I was going to handle my "Offers" (not a direct translation from the Dutch version, "Diensten"). 3 simple tables next to each other offering 3 different "packages" you can subscribe to in ascending order.

When I finished the "Offers" page of my website, I came to a conclusion for the theme of the website, thus the CSS code. It's pretty simple: a grey theme that's easy on the eyes, and the important stuff (pricing) in a more bright theme to be easily noticed by potential clients.

This is where it got pretty bad: I wrote all of my CSS code (about 300 lines), to then come to the conclusion that it had to be configured to be mobile-first, while I wrote the entirety of the code to be focused on Desktop browsers. It took me a little while to switch everything but it didn't take that long after all 😊.

Right now I finished the index page, the offers ("Diensten") page and finally a contact page with the necessary information to contact us via mail, phone call or even submit a form on the website itself that will be directly sent to my mailbox. I'm currently working on a "Information" page, where all the side-assignments I had to make for the GIP to be complete will be listed in order and with a little description for each of them. 😊
